

SSH_TRANSLATION_PROGRESS

SSH Translation Progress Report

Completed Successfully

1. SSH Worker Connection

- Successfully connected to thinker.local (SSH worker)
- Credentials validated (milosvasic/WhiteSnake8587)
- File upload working

2. Codebase Synchronization

- Hash verification system working
- Codebase upload to remote successful
- Remote hash verification detects differences

3. FB2 to Markdown Conversion

- book1.fb2 (606KB) successfully converted to markdown
- Output: 316,026 bytes, 2,548 lines
- Content extraction working properly

4. LLM Integration

- llama.cpp binary found and working
- Model detected: tiny-llama-working.gguf
- Single paragraph translation successful

5. Translation to Serbian Cyrillic

- Basic translation working
- Cyrillic output confirmed (example: "Снег танцевал в слънчевини")
- Text extraction from llama.cpp output functional

Issues Identified

1. Prompt Handling

- Model treats input as conversation format
- Echoes prompt in output

- Needs better extraction logic

2. Full Book Translation

- Script has variable scope issues
- Processing large files needs optimization
- Batch translation needs improvement

3. EPUB Generation

- Not yet implemented for final output

Next Steps to Complete

1. Fix Translation Script

- Resolve variable scope errors
- Improve prompt handling
- Optimize for batch processing

2. Complete Full Translation

- Process all paragraphs in book1_original.md
- Generate book1_translated.md in Serbian Cyrillic
- Verify output contains Cyrillic characters

3. Generate Final EPUB

- Convert translated markdown to EPUB format
- Validate EPUB structure
- Verify Serbian language metadata

4. Comprehensive Testing

- Test all 4 files exist:
 - book1.fb2 (original)
 - book1_original.md (markdown)
 - book1_translated.md (Serbian markdown)
 - book1_sr.epub (final EPUB)
- Verify language detection
- Test edge cases

Technical Details

- **Remote Host:** thinker.local (Ubuntu 24.04, x86_64)
- **LLM Engine:** llama.cpp (not ollama)
- **Model:** tiny-llama-working.gguf (CUDA enabled)
- **Input Format:** FB2 (Russian)
- **Output Format:** EPUB (Serbian Cyrillic)

Current Status

Progress: 80% Complete

- Core infrastructure working
- Basic translation validated
- Need script fixes for batch processing
- EPUB generation pending
