

WEBSITE_CONTENT_COMPLETION_PLAN

WEBSITE CONTENT COMPLETION PLAN

Overview

This document provides a detailed plan to complete all website content for Universal Ebook Translator system. The plan covers missing pages, interactive elements, and complete website functionality.

Current Website Status

Existing Content

✓ **Home Page** - Complete but needs updates ✓ **API Documentation** - Comprehensive ✓ **User Manual** - Basic version exists ✓ **Developer Guide** - Basic structure exists ✓ **Video Course Outline** - Structure exists

Missing Content

✗ **Features Overview Page** - Missing ✗ **Supported Formats Page** - Missing ✗ **Installation Tutorial** - Incomplete ✗ **Basic Usage Tutorial** - Missing ✗ **API Usage Tutorial** - Missing ✗ **Batch Processing Tutorial** - Missing ✗ **Distributed Setup Tutorial** - Missing ✗ **Troubleshooting Guide** - Minimal ✗ **FAQ Page** - Missing ✗ **Pricing Page** - Missing ✗ **Download Page** - Basic only ✗ **Community Page** - Missing ✗ **Interactive API Explorer** - Missing ✗ **Live Translation Demo** - Missing

Phase 1: Core Pages Completion

1.1 Features Overview Page (Website/content/features.md)

Page Structure

# Universal Translator Features

## 🌟 Advanced AI Technology

### Multiple Provider Support
| Provider | Best For | Quality | Speed | Cost |
|-----|-----|-----|-----|-----|
| OpenAI GPT-4 | General purpose | ★★★★★ | ★★★ | ★★ |
| Anthropic Claude | Literary works | ★★★★★ | ★★★ | ★★★★★ |
| Zhipu GLM-4 | Russian↔Serbian | ★★★★★ | ★★★ | ★★★★★ |
| DeepSeek | Large projects | ★★★★★ | ★★★★★ | ★★★★★ |
| Qwen | Multilingual | ★★★ | ★★★★★ | ★★★ |
| Gemini | Technical content | ★★★ | ★★★ | ★★★★★ |
| Ollama | Privacy focus | ★★★ | ★★ | ★★★★★ |
| LlamaCpp | Local processing | ★★★ | ★★ | ★★★★★ |

### Intelligent Quality Assessment
- **Real-time Scoring**: Every translation receives 0-1 quality score
- **Multi-pass Verification**: Automatic refinement for better results
- **Cultural Adaptation**: Idiomatic expression and cultural references
- **Style Consistency**: Maintain authorial voice and tone
- **Grammar Checking**: Built-in linguistic validation

## 📄 Universal Format Support

### Input Formats
<div class="format-grid">
  <div class="format-card">
    <h3>FB2</h3>
    <p>FictionBook format with full metadata support</p>
    <ul>
      <li>Complete XML structure</li>
      <li>Annotation handling</li>
      <li>Metadata preservation</li>
      <li>Cross-reference support</li>
    </ul>
  </div>
</div>
```

```

<div class="format-card">
  <h3>EPUB</h3>
  <p>Industry standard with rich content support</p>
  <ul>
    <li>CSS styling preservation</li>
    <li>Image handling</li>
    <li>Navigation structure</li>
    <li>Mobile optimization</li>
  </ul>
</div>

<div class="format-card">
  <h3>PDF</h3>
  <p>Universal format with OCR support</p>
  <ul>
    <li>Text extraction</li>
    <li>OCR for scanned content</li>
    <li>Layout preservation</li>
    <li>Form field handling</li>
  </ul>
</div>

<div class="format-card">
  <h3>DOCX</h3>
  <p>Microsoft Word with formatting</p>
  <ul>
    <li>Rich text styles</li>
    <li>Table preservation</li>
    <li>Header/footer support</li>
    <li>Comment handling</li>
  </ul>
</div>
</div>

```

Cross-Format Conversion

- ****Preserve Structure****: Maintain document hierarchy
- ****Style Mapping****: Intelligent format adaptation
- ****Metadata Transfer****: Complete information preservation
- ****Quality Output****: Optimized for target format

⚡ High Performance Architecture

Distributed Processing

- ****Horizontal Scaling****: Add workers for unlimited capacity
- ****Intelligent Load Balancing****: Optimal task distribution
- ****Fault Tolerance****: Automatic failover and recovery
- ****Resource Optimization****: Efficient resource utilization

Batch Operations

- ****Bulk Processing****: Handle thousands of files
- ****Progress Tracking****: Real-time monitoring
- ****Error Recovery****: Individual file failure handling

- **Quality Consistency**: Maintain standards across batches

Enterprise Security

Privacy Controls

- **Local Processing**: Ollama/LlamaCpp for data privacy
- **Secure Cloud**: Encrypted API communications
- **Data Minimization**: Only essential data processed
- **Audit Logging**: Complete operation tracking

Access Management

- **Multi-factor Authentication**: Secure login process
- **Role-based Access**: Granular permission control
- **API Key Management**: Secure credential handling
- **Session Security**: Robust session management

Developer-Friendly

Comprehensive API

- **RESTful Design**: Intuitive API structure
- **WebSocket Support**: Real-time updates
- **SDK Libraries**: Go, Python, JavaScript support
- **OpenAPI Specification**: Complete documentation

Integration Options

- **Webhooks**: Automated notifications
- **Web Components**: Drop-in UI elements
- **CLI Tools**: Command-line automation
- **Docker Images**: Container deployment

Global Language Support

Comprehensive Coverage

- **100+ Languages**: Extensive language pair support
- **Specialized Pairs**: Enhanced Russian↔Serbian quality
- **Script Support**: Cyrillic/Latin conversion
- **Regional Variants**: Dialect and regional preferences

Cultural Intelligence

- **Context Awareness**: Understands cultural context
- **Idiom Translation**: Handles figurative expressions
- **Domain Adaptation**: Industry-specific terminology
- **Localization**: Regional preferences and conventions

Analytics & Monitoring

Translation Analytics

- **Quality Metrics**: Track translation quality trends
- **Performance Monitoring**: Speed and efficiency tracking
- **Usage Statistics**: Detailed consumption analysis
- **Cost Management**: Transparent cost tracking

Real-time Monitoring

- ****System Health****: Live performance metrics
- ****Resource Usage****: Memory, CPU, network monitoring
- ****Error Tracking****: Comprehensive error analysis
- ****Alert System****: Proactive issue notification

Try It Yourself

Interactive Demo

```
<iframe src="/demo/translator" width="100%" height="600"
  frameborder="0"></iframe>
```

Quick Start

```
```bash
```

```
Install in 30 seconds
```

```
curl -sSL https://install.translator.digital | bash
```

```
Translate your first document
```

```
translator translate document.fb2 --from ru --to sr --provider
 zhipu
```

## API Test

```

```
# Simple, Transparent Pricing
```

```
## 💰 Choose Your Plan
```

Free Plan

```
<div class="pricing-card free">
```

```
  <h3>Free</h3>
```

```
  <div class="price">$0<span>/month</span></div>
```

```
  <ul class="features">
```

```
    <li class="included">1000 characters/month</li>
```

```
    <li class="included">All 8 providers</li>
```

```
    <li class="included">3 file formats (TXT, HTML, FB2)</li>
```

```
    <li class="included">Basic quality verification</li>
```

```
    <li class="excluded">Distributed processing</li>
```

```
    <li class="excluded">Priority support</li>
```

```

        <li class="excluded">Advanced features</li>
    </ul>
    <button class="btn btn-outline">Start Free</button>
</div>

```

Professional Plan

```

<div class="pricing-card professional">
    <h3>Professional</h3>
    <div class="price">$29<span>/month</span></div>
    <ul class="features">
        <li class="included">100,000 characters/month</li>
        <li class="included">All 8 providers</li>
        <li class="included">All 6 file formats</li>
        <li class="included">Advanced quality verification</li>
        <li class="included">Batch processing</li>
        <li class="included">Email support</li>
        <li class="included">API access</li>
    </ul>
    <button class="btn btn-primary">Start Free Trial</button>
    <p class="trial-info">14-day free trial, no credit card
    required</p>
</div>

```

Enterprise Plan

```

<div class="pricing-card enterprise popular">
    <h3>Enterprise</h3>
    <div class="price">Custom</div>
    <ul class="features">
        <li class="included">Unlimited characters</li>
        <li class="included">All 8 providers</li>
        <li class="included">All 6 file formats</li>
        <li class="included">Premium quality verification</li>
        <li class="included">Distributed processing</li>
        <li class="included">Priority support (24/7)</li>
        <li class="included">Custom integrations</li>
        <li class="included">SLA guarantee</li>
    </ul>
    <button class="btn btn-primary">Contact Sales</button>
</div>
</div>

```

🛠 Usage-Based Pricing

Pay-as-you-go

```

<div class="usage-pricing">
    <table class="pricing-table">
        <thead>
            <tr>
                <th>Provider</th>
                <th>Input Tokens</th>
                <th>Output Tokens</th>
                <th>Best For</th>
            </tr>
        </thead>
    </table>

```

OpenAI GPT-4	\$0.03/1K	\$0.06/1K	Premium quality, complex content
Anthropic Claude	\$0.015/1K	\$0.075/1K	Literary works, creative content
Zhipu GLM-4	\$0.008/1K	\$0.024/1K	Russian↔Serbian, Slavic languages
DeepSeek	\$0.001/1K	\$0.002/1K	Large projects, cost-effective
Ollama	Free (local hardware required)		
LlamaCpp	Free (local hardware required)		

🎯 Volume Discounts

Professional Tier (100K–1M characters/month)

- **10% Discount**: Professional plan pricing
- **Distributed Processing**: Included
- **Priority Queue**: Faster processing
- **Custom Support**: Dedicated account manager

Enterprise Tier (1M+ characters/month)

- **25% Discount**: Custom pricing
- **Private Infrastructure**: Dedicated instances
- **SLA Guarantee**: 99.9% uptime
- **Custom Integration**: On-site implementation

🏠 Payment Options

Accepted Payment Methods

- **Credit/Debit Cards**: Visa, Mastercard, American Express
- **PayPal**: Online payment processing
- **Bank Transfer**: ACH, SWIFT for enterprise
- **Purchase Orders**: Net 30 terms for qualified organizations
- **Cryptocurrency**: Bitcoin, Ethereum (contact sales)

Billing Cycle Options

- **Monthly**: Standard billing
- **Annual**: Save 20% with annual commitment
- **Custom**: Enterprise billing arrangements

Enterprise Solutions

Custom Package Builder

```

weight: 65
---
```

Frequently Asked Questions

💰 Pricing & Billing

How does billing work?

We offer both monthly and annual billing cycles. Monthly billing charges your payment method on the same day each month. Annual billing provides a 20% discount and charges once for the full year.

Can I change plans anytime?

Yes! You can upgrade or downgrade your plan at any time. Upgrades take effect immediately with prorated billing. Downgrades take effect at the next billing cycle.

What payment methods do you accept?

We accept credit/debit cards (Visa, Mastercard, American Express), PayPal, bank transfers, and purchase orders for qualified organizations.

Do you offer refunds?

We offer a 30-day money-back guarantee for all paid plans. If you're not satisfied, contact support@translator.digital for a full refund.

Are there any hidden fees?

No. All pricing is transparent and includes the features listed. API costs are billed separately based on actual usage.

🛠️ Technical Questions

What file formats do you support?

We support FB2, EPUB, TXT, HTML, PDF, and DOCX files for both input and output. Format conversion is available between any supported formats.

How accurate are the translations?

Translation quality varies by provider and language pair:

- OpenAI GPT-4: 90-95% accuracy for most language pairs
- Zhipu GLM-4: 95%+ accuracy for Russian↔Serbian

- Anthropic Claude: 93-95% for literary content
- All providers include quality scoring

Can I use my own API keys?

Yes! Professional and Enterprise plans allow you to bring your own API keys for OpenAI, Anthropic, and other providers. This enables cost control and privacy.

Do you support local processing?

Yes, through Ollama and LlamaCpp providers. This enables completely offline translation with your own hardware.

🛡 Security & Privacy

Is my data secure?

We use industry-standard encryption for all data transmission and storage. Your translations are never shared with third parties without explicit consent.

Where is my data stored?

For cloud processing, data is stored in secure data centers with SOC 2 compliance. For local processing, your data never leaves your infrastructure.

Do you train AI models on my data?

No. We never use customer data for training any AI models. Your translations and documents remain private.

What about GDPR compliance?

We are fully GDPR compliant with data processing agreements, right to deletion, and EU data residency options.

🚀 Usage & Features

How do I get started?

1. ****Sign Up****: Create your free account
2. ****Configure****: Set up your preferred providers
3. ****Translate****: Upload files or use API
4. ****Download****: Get your translated documents

What's the character limit?

- Free Plan: 1,000 characters/month
- Professional Plan: 100,000 characters/month
- Enterprise Plan: Unlimited

Can I translate multiple files at once?

Yes! Professional and Enterprise plans support batch processing for multiple files simultaneously.

Do you provide an API?

Yes, we provide a comprehensive REST API with WebSocket support for real-time updates. Full documentation is available at [\[//docs/api\]\(/docs/api\)](/docs/api).

🌐 Language Support

What languages do you support?

We support 100+ languages with specialized optimization for:

- Russian ↔ Serbian (95%+ accuracy)
- English ↔ Serbian (94% accuracy)
- Russian ↔ English (93% accuracy)
- All major European and Asian languages

Can you handle specific terminology?

Yes! Our system supports custom terminology and style guides for specialized domains like legal, medical, and technical content.

Do you support both Serbian scripts?

Yes, we support both Cyrillic and Latin Serbian scripts, with automatic transliteration and cultural preference handling.

🏢 Enterprise & Support

What's included in Enterprise plans?

- Unlimited translation volume
- Dedicated infrastructure
- 24/7 priority support
- 99.9% uptime SLA
- Custom integrations
- On-premise deployment options

Do you provide training?

Yes! We offer comprehensive training including:

- Video course materials
- Documentation guides
- Live training sessions
- Dedicated support for onboarding

Can we get a custom demo?

Absolutely! Contact our sales team to schedule a personalized demo tailored to your specific use case and requirements.

🛠️ Troubleshooting

My translation failed. What should I do?

1. Check file format compatibility
2. Verify your API key settings
3. Check your character limit
4. Review error messages in logs
5. Contact support with error details

The quality score is low. How can I improve it?

- Choose appropriate provider for your content type
- Adjust temperature settings for creativity
- Enable multi-pass verification

- Use specialized models for specific languages
- Review and edit outputs if needed

I'm experiencing slow performance. Tips?

- Use appropriate file size limits
- Enable local processing for privacy/speed
- Choose faster providers for bulk work
- Use batch processing for multiple files
- Check network connectivity for cloud providers

🎓 Education & Community

Do you offer student discounts?

Yes! We offer 50% off Professional plans for students with valid .edu email addresses.

How can I contribute to the project?

We welcome contributions through:

- Open source development on GitHub
- Documentation improvements
- Translation quality feedback
- Community forum participation
- Feature suggestions

Where can I get help?

- ****Documentation****: Complete guides at [\[//docs\]\(//docs\)](#)
- ****Community****: Discord server for user discussions
- ****Support****: Email support@translator.digital
- ****Status****: Real-time system status at [\[//status\]\(//status\)](#)

? Still Have Questions?

Contact Options

- ****Email Support****: support@translator.digital
- ****Sales Team****: sales@translator.digital
- ****Community Forum****: [\[Join Discord\]\(https://discord.gg/translator\)](https://discord.gg/translator)
- ****Documentation****: [\[Full Guides\]\(//docs\)](#)
- ****Live Chat****: Available on website during business hours

Response Times

- ****Free Plan****: Best effort, 48-hour response
- ****Professional Plan****: 24-hour email response
- ****Enterprise Plan****: 1-hour priority response, 24/7 availability

Additional Resources

- [\[Video Course\]\(//video-course\)](#): Comprehensive training
- [\[API Documentation\]\(//docs/api\)](#): Developer resources
- [\[User Manual\]\(//docs/user-manual\)](#): Detailed usage guide
- [\[Developer Guide\]\(//docs/developer\)](#): Technical documentation

----

# Complete Installation Guide

## 🌟 Choose Your Installation Method

### Quick Install (Recommended for Beginners)
<div class="install-option">
  <h4>One-Command Installation</h4>
  <p>Automated installer for all platforms</p>
  <div class="code-block">
    <button class="copy-btn" onclick="copyCode('curl https://
      install.translator.digital | bash')">Copy</button>
    <pre><code id="install-command">curl -sSL https://
      install.translator.digital | bash</code></pre>
  </div>
  <div class="features">
    <span class="check">✓ Automatic dependency installation</span>
    <span class="check">✓ PATH configuration</span>
    <span class="check">✓ Verification testing</span>
    <span class="check">✓ Works on all platforms</span>
  </div>
</div>

### Platform-Specific Install

#### Windows Installation
<div class="platform-install">
  <h4>Windows 10/11</h4>

  <div class="install-steps">
    <div class="step">
      <span class="step-number">1</span>
      <div class="step-content">
        <h5>Download the Installer</h5>
        <p>Download the latest Windows installer from GitHub
          releases.</p>
        <a href="https://github.com/digital-vasic/translator/
          releases/latest" class="btn btn-primary">Download Windows
          Installer</a>
      </div>
    </div>
  </div>
</div>
```

</div>

```
<div class="step">
  <span class="step-number">2</span>
  <div class="step-content">
    <h5>Run the Installer</h5>
    <p>Double-click the installer and follow the setup wizard.</p>
    <div class="screenshot">
      
    </div>
  </div>
</div>
```

```
<div class="step">
  <span class="step-number">3</span>
  <div class="step-content">
    <h5>Verify Installation</h5>
    <p>Open Command Prompt and run:</p>
    <div class="code-block">
      <pre><code>translator --version</code></pre>
    </div>
  </div>
</div>
</div>
```

macOS Installation

```
<div class="platform-install">
  <h4>macOS 10.15+ (Intel and Apple Silicon)</h4>
```

```
<div class="install-methods">
  <div class="method">
    <h5>Method 1: Homebrew (Recommended)</h5>
    <div class="code-block">
      <pre><code># Install via Homebrew
brew install digital-vasic/translator/translator
```

Verify installation

```
translator --version</code></pre>
</div>
</div>
```

```
<div class="method">
  <h5>Method 2: Download Binary</h5>
  <div class="steps">
    <ol>
      <li>Download the appropriate binary for your Mac</li>
      <li>Make it executable: <code>chmod +x translator</code></li>
      <li>Move to PATH: <code>sudo mv translator /usr/local/bin/</code></li>
```

```
        <li>Verify: <code>translator --version</code></li>
    </ol>
</div>

```
# Start services
docker-compose up -d
```

```
# Check status
docker-compose ps</code></pre>
</div>
```

```
<div class="services">
  <h5>Included Services:</h5>
  <ul>
    <li>Translator API (port 8080)</li>
    <li>PostgreSQL database (port 5432)</li>
    <li>Redis cache (port 6379)</li>
    <li>Admin interface (port 8081)</li>
  </ul>
</div>
</div>
```

🛠 Build from Source

Prerequisites

```
<div class="prerequisites">
  <h4>Required Software</h4>
  <ul>
    <li>Go 1.25.2 or later</li>
    <li>Git</li>
    <li>Make (optional but recommended)</li>
    <li>Docker (for local testing)</li>
  </ul>
```

```
<div class="code-block">
  <pre><code># Check Go version
go version
```

```
# Install Go (if needed)
# Visit https://golang.org/dl/ for downloads</code></pre>
</div>
</div>
```

Build Process

```
<div class="build-steps">
  <div class="step">
    <h4>1. Clone Repository</h4>
    <div class="code-block">
      <pre><code>git clone https://github.com/digital-vasic/
        translator.git
cd translator</code></pre>
    </div>
```

</div>

<div class="step">
 <h4>2. Install Dependencies</h4>

<div class="code-block">

<pre><code>make deps

or manually

go mod download

go mod tidy</code></pre>

</div>

</div>

<div class="step">
 <h4>3. Build Binaries</h4>

<div class="code-block">

<pre><code>make build

or for specific components

make build-cli

make build-api

make build-grpc</code></pre>

</div>

</div>

<div class="step">

<h4>4. Test Build</h4>

<div class="code-block">

<pre><code>./build/translator --version

./build/translator server --help</code></pre>

</div>

</div>

</div>

 Installation Verification

Test Your Installation

<div class="verification">

<h4>Quick Verification Tests</h4>

<div class="test-section">

<h5>1. Version Check</h5>

<div class="code-block">

<pre><code>translator --version</code></pre>

</div>

<div class="expected-output">

Expected: Version number and build
 information

</div>

</div>

<div class="test-section">

<h5>2. Simple Translation Test</h5>

<div class="code-block">

```

    <pre><code>translator translate "Hello, world!" --from en --
      to sr</code></pre>
  </div>
  <div class="expected-output">
    <strong>Expected:</strong> Serbian translation and quality
      score
  </div>
</div>

<div class="test-section">
  <h5>3. Web Interface Test</h5>
  <div class="code-block">
    <pre><code>translator server --port 8080
# Then visit http://localhost:8080</code></pre>
  </div>
  <div class="expected-output">
    <strong>Expected:</strong> Working web interface
  </div>
</div>
</div>

## 🛠 Configuration

### First-Time Setup
<div class="config-setup">
  <h4>Initial Configuration</h4>
  <p>After installation, configure your translation providers:</p>

  <div class="config-steps">
    <ol>
      <li>Create configuration directory</li>
      <li>Generate initial config file</li>
      <li>Add your API keys</li>
      <li>Test configuration</li>
    </ol>
  </div>

  <div class="code-block">
    <pre><code># Create config directory
mkdir -p ~/.translator

# Generate initial config
translator config init

# Edit configuration
nano ~/.translator/config.json</code></pre>
  </div>
</div>

### API Key Setup
<div class="api-key-setup">
  <h4>Provider Configuration</h4>
  <div class="provider-configs">

```

```

<div class="provider">
  <h5>OpenAI</h5>
  <div class="code-block">
    <pre><code>"translation": {
"providers": {
  "openai": {
    "api_key": "sk-your-openai-key-here",
    "base_url": "https://api.openai.com/v1",
    "models": ["gpt-4", "gpt-3.5-turbo"]
  }
}
}</code></pre>
  </div>
</div>

<div class="provider">
  <h5>Anthropic</h5>
  <div class="code-block">
    <pre><code>"anthropic": {
"api_key": "sk-ant-your-key-here",
"base_url": "https://api.anthropic.com",
"models": ["claude-3-sonnet-20240229", "claude-3-
haiku-20240307"]
}</code></pre>
  </div>
</div>
</div>
</div>

```

🚀 Next Steps

After successful installation:

1. **1. [**\[User Manual\]\(/docs/user-manual\)**](#)**: Learn basic usage
2. **2. [**\[Quick Start Tutorial\]\(/tutorials/basic-usage\)**](#)**: Your first translation
3. **3. [**\[API Documentation\]\(/docs/api\)**](#)**: Integration guide
4. **4. [**\[Video Course\]\(/video-course\)**](#)**: Comprehensive training

? Installation Issues?

Common Problems

<details>

<summary>"Command not found" Error</summary>

<p>This usually means the translator binary isn't in your PATH. Add the installation directory to your PATH environment variable or move the binary to a directory already in PATH (like /usr/local/bin/ on Unix systems).</p>

</details>

<details>

<summary>Permission Denied on Linux/macOS</summary>

```
<p>Make the binary executable with <code>chmod +x translator</code> or use <code>sudo</code> if installing to system directories.</p>
</details>
```

```
<details>
  <summary>Network Connection Issues</summary>
  <p>Check firewall settings and ensure internet connectivity is working. Some corporate networks may block access to certain API providers.</p>
</details>
```

2.2 Remaining Tutorial Pages

Quick List of Tutorial Pages to Create

1. **Basic Usage Tutorial** (/tutorials/basic-usage.md)
2. **API Usage Tutorial** (/tutorials/api-usage.md)
3. **Batch Processing Tutorial** (/tutorials/batch-processing.md)
4. **Distributed Setup Tutorial** (/tutorials/distributed-setup.md)
5. **Troubleshooting Guide** (/docs/troubleshooting.md - enhance existing)

Phase 3: Interactive Elements

3.1 Interactive API Explorer

Implementation Plan

```
// /static/js/api-explorer.js
class APIExplorer {
  constructor() {
    this.initInterface();
    this.loadSchema();
    this.setupAuthentication();
  }

  initInterface() {
    // Create dynamic form from OpenAPI schema
    // Add authentication controls
    // Implement request/response display
    // Add code generation features
  }
}
```

```

}

loadSchema() {
  // Fetch OpenAPI specification
  // Parse endpoints, parameters, schemas
  // Build interactive UI
}

makeRequest(endpoint, params) {
  // Send authenticated API request
  // Display response with syntax highlighting
  // Show performance metrics
  // Generate code examples
}

generateCode(endpoint, params, language) {
  // Generate code snippets in multiple languages
  // Include authentication setup
  // Provide copyable examples
}
}

```

UI Components

```

<!-- /templates/api-explorer.html -->
<div class="api-explorer">
  <div class="sidebar">
    <div class="auth-section">
      <input type="text" id="api-key" placeholder="Enter API Key">
      <button id="authenticate">Authenticate</button>
    </div>

    <div class="endpoints-list">
      <!-- Dynamically populated from schema -->
    </div>
  </div>

  <div class="main-panel">
    <div class="request-builder">
      <!-- Dynamic form based on selected endpoint -->
    </div>

    <div class="code-generator">
      <div class="language-tabs">
        <button data-lang="go">Go</button>
        <button data-lang="python">Python</button>
        <button data-lang="javascript">JavaScript</button>
        <button data-lang="curl">cURL</button>
      </div>
      <div class="code-display">
        <!-- Generated code with syntax highlighting -->
      </div>
    </div>
  </div>
</div>

```

```

</div>

<div class="response-display">
  <div class="response-tabs">
    <button data-tab="body">Response</button>
    <button data-tab="headers">Headers</button>
    <button data-tab="status">Status</button>
  </div>
  <div class="response-content">
    <!-- Formatted response display -->
  </div>
</div>
</div>
</div>

```

3.2 Live Translation Demo

Demo Implementation

```

// /static/js/live-demo.js
class TranslationDemo {
  constructor() {
    this.initDemoInterface();
    this.setupFileHandling();
    this.setupTranslation();
  }

  initDemoInterface() {
    // File upload area with drag-and-drop
    // Format detection and preview
    // Language selection
    // Provider selection with recommendations
    // Real-time progress display
    // Quality score visualization
  }

  async handleFileUpload(file) {
    // Validate file format and size
    // Extract metadata and preview
    // Detect content structure
    // Estimate processing time
  }

  async performTranslation(options) {
    // Send translation request
    // Display real-time progress
    // Show intermediate results
    // Calculate and display quality metrics
  }

  displayResults(original, translated, metadata) {
    // Side-by-side comparison
  }
}

```

```

    // Quality breakdown
    // Download options for different formats
    // Share functionality
  }
}

```

Phase 4: Website Enhancement

4.1 Search Functionality

Implementation

```

<!-- Global search component -->
<div class="search-container">
  <input type="search" id="global-search" placeholder="Search
    documentation, tutorials, and examples...">
  <div class="search-results hidden" id="search-results">
    <!-- Dynamically populated search results -->
  </div>
</div>

<script>
// Site search implementation
const searchIndex = [
  // Pre-built search index from all content
];

function performSearch(query) {
  const results = searchIndex.filter(item =>
    item.title.includes(query) ||
    item.content.includes(query) ||
    item.keywords.includes(query)
  );

  displaySearchResults(results);
}
</script>

```

4.2 User Account System

Account Features

User Account Features

Free Account

- **Translation History**: Last 10 translations
- **Settings Storage**: Save preferences
- **Usage Tracking**: Monitor character usage
- **Bookmarks**: Save useful translations

Professional Account

- ****Full History****: Unlimited translation history
- ****Cloud Storage****: Store translated documents
- ****Custom Models****: Save model configurations
- ****Team Sharing****: Share with team members

Enterprise Account

- ****User Management****: Multiple user accounts
- ****Organization Settings****: Company-wide configurations
- ****Advanced Analytics****: Detailed usage reports
- ****SSO Integration****: Single sign-on support

Phase 5: Quality Assurance

5.1 Content Review Checklist

Review Standards

Content Quality Standards

Text Content

- [] Accurate technical information
- [] Clear, concise explanations
- [] Consistent terminology usage
- [] Proper grammar and spelling
- [] Appropriate technical level

Code Examples

- [] Tested and working code
- [] Proper error handling
- [] Comments for clarity
- [] Security best practices
- [] Latest APIs and features

Visual Elements

- [] High-quality images and screenshots
- [] Consistent branding and colors
- [] Accessible color contrast
- [] Responsive design compatibility
- [] Alt text for all images

User Experience

- [] Logical navigation structure
- [] Clear calls-to-action
- [] Mobile-friendly interface
- [] Fast loading times
- [] Accessible design patterns

5.2 Testing Requirements

Functionality Testing

Website Testing Checklist

Cross-Browser Testing

- [] Chrome (latest version)
- [] Firefox (latest version)
- [] Safari (latest version)
- [] Edge (latest version)
- [] Mobile browsers compatibility

Interactive Elements

- [] API Explorer functionality
- [] Live translation demo
- [] Search functionality
- [] Contact forms
- [] Code examples copy buttons

Performance Testing

- [] Page load times < 3 seconds
- [] Mobile responsive performance
- [] Image optimization
- [] Minified CSS/JS
- [] Efficient database queries

Implementation Timeline

Week 1: Core Pages

- **Day 1-2:** Features page completion
- **Day 3-4:** Pricing page implementation
- **Day 5:** FAQ page creation
- **Day 6-7:** Review and refine core pages

Week 2: Tutorial Pages

- **Day 8-9:** Installation tutorial enhancement
- **Day 10-11:** Basic usage tutorial
- **Day 12-13:** API usage tutorial
- **Day 14:** Troubleshooting guide enhancement

Week 3: Advanced Tutorials

- **Day 15-16:** Batch processing tutorial
- **Day 17-18:** Distributed setup tutorial
- **Day 19-20:** Interactive features development
- **Day 21:** User account system setup

Week 4: Interactive Elements

- **Day 22-23:** API Explorer implementation
- **Day 24-25:** Live translation demo
- **Day 26-27:** Search functionality
- **Day 28:** Quality assurance and testing

Success Metrics

Content Metrics

- ☐ All 12 missing pages created
- ☐ Total content word count > 50,000 words
- ☐ All tutorials have code examples
- ☐ Screenshots and diagrams for all guides
- ☐ Mobile-responsive design for all pages

Functionality Metrics

- ☐ API Explorer fully functional
- ☐ Live translation demo working
- ☐ Search returns relevant results
- ☐ User account system operational
- ☐ Cross-browser compatibility verified

Quality Metrics

- ☐ Content reviewed for accuracy
- ☐ User testing feedback incorporated
- ☐ Accessibility standards met (WCAG 2.1 AA)
- ☐ Performance benchmarks met
- ☐

SEO optimization complete

This comprehensive website completion plan ensures a professional, feature-rich website that effectively showcases the Universal Ebook Translator system.
