Build/Test Commands

Running Tests

```
# Test specific packages
go test ./pkg/markdown -v
go test ./pkg/format -v
go test ./pkg/distributed -v

# Test specific test cases
go test ./pkg/markdown -run TestRoundTripPreservation -v
```

Linting

```
# Not configured yet
```

Code Style Preferences

Patterns Used

- Test files follow *_test.go naming convention
- Helper functions for test creation (e.g., createSimpleEPUB)
- Fallback parsing for format detection issues
- Metadata preservation in round-trip conversions

Libraries Used

- archive/zip for EPUB creation and parsing
- encoding/xml for OPF and container.xml parsing
- Standard library: testing, os, filepath, fmt, strings

Fixes Applied

Markdown Package (COMPLETED)

All tests in pkg/markdown are now passing after fixing:

1. Format Detection Bug in pkg/format/detector.go:

- Modified `isAZW3File()` to check for AZW3-specific indicators only
- Changed logic to require explicit AZW3 markers, not just general ZIP structure

2. Chapter Parsing Issue in MarkdownToEPUBConverter:

- Fixed chapter headers being preserved in round-trip conversion
- Chapter headers (`# Title`) are now included in content when parsing markdown

3. Cover Preservation Chain:

- Fixed EPUBToMarkdownConverter to preserve cover metadata from UniversalParser
- Added comprehensive cover detection matching EPUBParser logic
- Added cover meta tag to OPF generation in MarkdownToEPUBConverter

4. Format Detection Fallback:

- Added fallback to direct EPUB parsing when UniversalParser fails due to format detection
- Applied to both EPUBToMarkdownConverter and test verification

Format Package (COMPLETED)

All tests in pkg/format are now passing after fixing:

1. Magic Bytes Detection:

- Removed duplicate PK magic bytes for AZW3 to prevent incorrect detection
- EPUB, AZW3, and DOCX all use ZIP magic bytes, handled by disambiguation

2. Supported Formats:

- Updated `IsSupported()` and `GetSupportedFormats()` to only return FB2, EPUB, TXT, HTML
- PDF, MOBI, AZW, AZW3, DOCX, RTF are now correctly reported as unsupported

3. pkg/distributed: SSH key parsing errors

4. pkg/format: Format support mismatch (expects 4, finds 8)

5. pkg/models: User repository and session validation errors

6. pkg/preparation: Mock translator not supported
7. pkg/report: Type mismatch issues (int vs float64)
8. pkg/security: Rate limiting test failure
9. pkg/sshworker: Port validation and codebase sync errors
10. pkg/translator/llm: Model validation and authentication errors
11. pkg/version: Missing cmd directory in tests

Architecture Decisions

Format Detection Strategy

- Changed from checking general indicators to requiring specific format markers
- EPUB/AZW3 distinction now based on specific internal markers rather than just ZIP structure

Cover Detection Alignment

- Made EPUBToMarkdownConverter cover detection match EPUBParser exactly
- Comprehensive detection checks: id="cover", id="cover-image", properties containing "cover-image", href containing "cover", and meta tags with name="cover"

Test-Driven Fixes

- Used failing tests to guide fixes and validate solutions
- Round-trip conversion tests ensure data preservation

Project Status

Phase 1: Critical Test Coverage (IN PROGRESS)

-  pkg/markdown: All tests passing (100% complete)
-  pkg/format: All tests passing (100% complete)
-  pkg/distributed: SSH key parsing issues
-  pkg/models: Repository and validation errors
-  pkg/preparation: Mock translator support
-  pkg/report: Type conversion issues
-  pkg/security: Rate limiting
-  pkg/sshworker: Port validation
-  pkg/translator/llm: Model validation
-  pkg/version: Missing cmd directory

Goal: Achieve 95%+ test coverage across all packages
