

README

E2E Proof — CLI honors -o output format (was: always emitted EPUB)

Date: 2026-06-14 **Constitution:** §11.4 anti-bluff, §11.4.98 self-driving tests, §11.4.107 captured evidence, §11.4.120 gate reconciliation, §11.4.135 regression guard, §11.4.146 reproduce→fix→extend

Defect

cmd/unified-translator ALWAYS called generateEPUB for the output step, ignoring the -o extension. -o book.txt / -o book.fb2 wrote EPUB (PK-zip) bytes into a misnamed file — a silent wrong-output defect (§11.4: user asks for one format, silently gets another).

Fix

New generateOutput(content, outputPath, inputFile) dispatches on the output extension: .epub (default) → EPUB; .txt/.md → translated text written directly; .fb2 → ebook.FB2Writer; unsupported extension → explicit error (§11.4.6), never a misnamed EPUB.

Real-system proof (this directory)

Same English PDF → real DeepSeek deepseek-chat → two output formats:

- out.txt — UTF-8 plain text (first bytes d0a1 = Cyrillic 'C', NOT PK), 135 Cyrillic chars, real Serbian content.
- out.fb2 — valid <FictionBook> XML, 138 Cyrillic chars.
- run_txt.log, run_fb2.log — translator logs (no API-key printing).

out.txt content

Садржај документа Храбри витез јахао је кроз тиху долину у зору. Носио је старо писмо запечаћено црвеним воском. Планине су стајале тихо под бледим јутарњим небом.

Permanent regression guard (§11.4.135)

cmd/unified-translator/output_format_test.go — asserts .txt is not a zip, .fb2 is FictionBook XML, unsupported ext errors. MUTATION-PROVEN: forcing generateOutput to always-EPUB → .txt + .fb2 subtests FAIL (verified this session).

Companion gate reconciliations (§11.4.120)

- test/unit/format_detector_test.go — PDF + DOCX moved to supportedFormats (their real extractors landed); MOBI stays unsupported.
- cmd/cli/main_comprehensive_test.go TestTranslateEbookFunction/with_app_config — was a §11.4.98 bluff: skip-guard fired only when NO key present, then forced openai + a fake "config-key", dialled REAL OpenAI, 401'd, and failed NoError whenever any other provider key was in env. Rewritten to a self-driving httptest OpenAI mock (config BaseURL → mock); asserts success + mock-was-hit + non-empty output. No real network, no env dependency.
