E2E Proof — PDF input revived (unipdf license-gate removed)

Date: 2026-06-14 **Constitution:** §11.4 anti-bluff, §11.4.107 captured evidence, §11.4.120 gate reconciliation, §11.4.135 regression guard, §11.4.146 reproduce→fix→extend

Defect

PDF input shipped backed by `github.com/unidoc/unipdf`, whose text extractor is LICENSE-GATED (`ExtractText` → "unipdf license code required" for every real PDF). PDF input was non-functional — a §11.4 "ships but cannot be used" defect masked by unit tests that only fed invalid bytes and asserted failure.

Fix

Swapped to MIT `github.com/ledongthuc/pdf`; `unidoc/unipdf` dropped from `go.mod` via `go mod tidy`. Wired `FormatPDF` into `pkg/format/detector.go` `IsSupported` + `GetSupportedFormats` (§11.4.120). Companion DOCX fix landed earlier (`stdlib` OOXML).

Real-system proof (this directory)

- `input_sample_en.pdf` — minimal valid single-page English PDF (3 known sentences)
- `output_sr.epub` — real DeepSeek (`deepseek-chat`) translation output, 1.9s real API call
- `extracted_chapter.xhtml` — OEBPS/`chapter1.xhtml` extracted from the EPUB
- `run.log` — translator run log (CLI never prints API keys)

Extracted Serbian (Cyrillic) output

Храбри витез јахао је преко тихог сванућа у зору. Носио је старо писмо запечаћено црвеним воском. Планине су стајале тихо под бледим јутарњим небом.

(= "The brave knight rode across the silent valley at dawn. He carried an old letter sealed with red wax. The mountains stood quiet under a pale morning sky.")

Anti-bluff checks (all PASS)

1. Cyrillic chars in output: 138 (>20) — real target-script text
2. Output differs from English source (no pass-through)
3. No placeholder/TODO/mock text
4. Non-trivial length: 279 chars
5. NO API-key leak across all evidence (§11.4.10)

Permanent regression guard (§11.4.135)

`pkg/ebook/pdf_extraction_regression_test.go` + `pkg/ebook/testdata/sample_text.pdf` — asserts real extraction of the known sentences AND rejects any "license"-error string. Mutation (§1.1): revert to the unipdf extractor → extraction returns empty/license-error → test FAILs.
