

generate_fixed_summary.sh

generate_fixed_summary.sh

Revision: 1 **Last modified:** 2026-06-14T15:37:53Z

Overview

Regenerates docs/Fixed_Summary.md from docs/Fixed.md, satisfying §11.4.53 (Fixed_Summary parity), §11.4.54 (ATM-NNN leftmost column), §11.4.19 (column-alignment with Status + Type), and §11.4.91 (clear one-line descriptions). The summary is a derived artifact — never hand-edit it; edit docs/Fixed.md and re-run.

Prerequisites

- POSIX awk, coreutils (date, grep). No network. No credentials.

Usage

```
scripts/testing/generate_fixed_summary.sh          # docs/  
Fixed.md → docs/Fixed_Summary.md  
scripts/testing/generate_fixed_summary.sh SRC.md OUT.md #  
explicit paths
```

Internal behaviour

Each ### \$N. [ATM-NNN] <title> heading in the source is parsed for its ATM id and one-line description (the heading text after the id); the following **Status:** and **Type:** lines (within the entry) supply the table cells. Emits ATM ID | Level | Status | Type | One-line description plus a total count.

Edge cases

- A heading with no [ATM-NNN] token is skipped.
- Missing Status/Type render as empty cells (surfaces an under-specified entry).
- Overwrites only the summary file; the source is never modified.

Related scripts

- `scripts/testing/generate_issues_summary.sh` — the open-tracker companion.

Last verified: 2026-06-14 (sh -n + bash -n clean; round-trip produced 64-row table).
