§11.4.153 FEATURE-STATUS VIDEO- CONFIRMATION SYNC (2026-06-15, ~25 real videos → ledger honest)

The §11.4.153 per-feature Status ledger is now in honest sync with the real video evidence captured this session (docs uncommitted — conductor to commit; do NOT git add -A).

What landed before this sync (already pushed): - §11.4.153 doc set (docs/features/Status.md + Status_Summary.md, 470/472 features, four-format HTML+PDF+DOCX) shipped in 58178a5; constitution bump 74e7fbe. - **3 video-surfaced bugs FIXED + pushed** in a5e8866 (the green suite had missed all 3, §11.4.4/§11.4.138): (1) preparation-translator DEAD — DeepSeek API key never reached config (-api-key/env not wired) → “DeepSeek API key is required”, no analysis JSON; (2) cmd/server TLS startup — config with no tls_cert_file failed to start; fix backfills self-signed certs in LoadConfig; (3) REST POST /api/v1/translate ignored target_lang (hardcoded) → always Serbian regardless of requested language. - **~25 real videos** captured under /Volumes/T7/Downloads/Recordings/helixtranslate-*.mp4 (all ffprobe-verified dur>0+frames>0; key ones content-verified frame-by-frame this session). - **All 9 owned submodules GREEN** — coverage logs qa-results/submodule_coverage_20260615/. - **README §11.4.57** Tracked-Items doc-link section added (prior session).

This sync (Status.md/Status_Summary.md Rev 1→2 + exports re-synced): - **Video-confirmed: 1 → 20** feature rows (≈4.3% of 472), each flipped to Confirmed: ONLY after the cited .mp4 was content-verified (§11.4.6 no overclaim). Confirmed: unified-translator (DeepSeek translate; EPUB→TXT / HTML→EPUB / FB2→EPUB / FB2→FB2; Serbian-Cyrillic; -script Cyrillic↔Latin; format-detection; help/version; -verify), REST API (POST /api/v1/translate real DeepSeek + target_lang FIXED, TLS startup FIXED, /health/version/providers), gRPC (real EN→ES), markdown-translator (EPUB↔MD round-trip), preparation-translator (FIXED), cmd/cli (real DeepSeek), monitor-server (live WS hub), DeepSeek library client. - **Honest gaps recorded (§11.4.6, NOT confirmed):** DOCX output + PDF output UNIMPLEMENTED (no writer in pkg/ebook; unified-translator rejects them; 2 new gap rows added → 472 total); -verify ≠ pkg/verification multipass engine (engine has no CLI entry point wired in); cmd/translator local path = STUB (“local translation not yet implemented”); cmd/translate-ssh + cmd/ebook-translator = OPERATOR-BLOCKED (need remote SSH/llama.cpp worker host); GET /api/v1/verified-

models = 404 (LLMsVerifier disabled in config); cmd/cli minor cosmetic file-path-leak into title metadata. - **Exports + fingerprint re-synced** via docs_chain sync features (applied: 6 derived nodes — HTML/PDF/DOCX × 2 docs) → docs_chain verify features = **in-sync** (RC=0); evidence qa-results/docs_chain/20260615T144104Z/sync.log; docs_chain state.json = \$11.4.86 content-hash fingerprint store.

NEXT (open gaps queued): implement DOCX/PDF output writers in pkg/ebook; wire pkg/verification multipass engine into a CLI entry point; implement cmd/translator local path; produce videos for remaining PENDING runtime features (web dashboard translation, other providers) to lift coverage. translate-ssh/ebook-translator stay OPERATOR-BLOCKED until a remote SSH/llama.cpp host is provided.

WAVE 15 — SECOND-PASS + determinism (campaign 101→110; second pass STILL productive)

Parent HEAD 6c89910, build/vet/test green, git OK, llms_verifier pointer intact. - **pkg/ebook** 6c11dee (#102): EPUB parser set chapter.Title to the zip entry name → EPUB→translate→EPUB rendered “OEBPS/chapter1.xhtml” as every chapter heading + TOC entry (core use case). Fix = extractChapterTitle (
