

CONTINUATION — HelixTranslate

CONTINUATION — HelixTranslate session-resumption file

Revision: 79 Last modified: 2026-06-15T22:30:00Z

 **RESUME HERE (2026-06-15 ~22:30) —
submodule reconciliation COMPLETE; bridge
phase-2 P-1 DONE, P-1.5 IN FLIGHT**

§11.4.127 SHORT resumption (paste this first sentence into a fresh session)

Read docs/CONTINUATION.md (this file) + .remember/remember.md FIRST, then
git fetch --all --prune; we are mid **bridge phase-2 — the no-local-runtime
mandate** (operator CRITICAL): P-1 (BestClient adapter) is DONE, **P-1.5**
(provider-diverse verified-model API + injectable factory seam) is IN FLIGHT, then
R-1→R-5 redirect/remove per docs/design/
BRIDGE_PHASE2_EXECUTION_PLAN.md — continue the endless autonomous loop
(§11.4.126), no force-push (§11.4.113), require API keys (no local llama.cpp/
Ollama/SSH-distributed).

§11.4.127 FULL resumption (live-state anchors — verified this session against git)

- **Parent HEAD 4a4e29b** on main, local == origin/main (0 ahead / 0 behind).
Working tree carries UNCOMMITTED doc/build/submodule-pointer churn —
conductor commits the doc-set ONLY (no git add -A, §11.4.30).
- **All owned submodules reconciled (governance markers stripped to
canonical-per-constitution bodies), CLEAN, synced, gitlinks bumped —
verified this session:**
 - security 24b9bb7 · doc_processor 5316c4a · llm_orchestrator ab2eec6 ·
llm_provider 55057ee · vision_engine e19b52b · constitution 9f3147e
(FF-integrated remote anchors §11.4.154–157)
 - challenges 349b0f1 · docs_chain 0c72cdd · llms_verifier 89719e2b ·
containers 2a9923a — verified clean+synced, NO work needed (challenges
shows only untracked Containers/+Panoptic/ scratch dirs, recorded
gitlink matches HEAD).

- Parent gitlink-bump commits this session: 49d94f2, c62128f, 6a620f5.
- **Key parent commits this session:** verifier affirmative-response hard-gate fix 97a8afd (RED→GREEN, -race clean); bridge Invoke routing-seam a5860b2; **bridge BestClient adapter e5307ce (P-1 — returns llm.LLMClient, GetProviderName from BestModel.ProviderID)**; bridge phase-2 execution plan afc3c35; §11.4.153 ledger 5b266ad + bridge real-use video 4a4e29b (video-confirmed 21→22, model **novita/Sao10K/L3-8B-Stheno-v3.2** score **0.919**, live EN→ES “Buenos días, amigo.”, ffmpeg 8.0s/80fr, .mp4 at /Volumes/T7/Downloads/Recordings/helixtranslate-bridge-bestmodel-translate-20260615.mp4); constitution §11.4.154–157 propagation into CLAUDE/AGENTS/QWEN/GEMINI 6e0e4d9 + parent CONSTITUTION.md 5d05ab7.

Bridge phase-2 — the CRITICAL no-local-runtime mandate (current state + remaining work)

Operator-CRITICAL: NO local runtime — only LLMsVerifier strongest models, bridged to components AND this Claude Code session. Plan doc: **docs/design/BRIDGE_PHASE2_EXECUTION_PLAN.md** (+ design docs/design/LLMSVERIFIER_BRIDGE.md, removal map docs/design/LOCAL_RUNTIME_REMOVAL.md).

LOCKED operator decisions: D1 remove local runtimes entirely; D2 forbid ALL local runtimes (llama.cpp + Ollama); R1 **Obsolete** the SSH/distributed worker path (§11.4.90); R2 **require API keys everywhere** (no offline/local fallback — tests FAIL, not skip, when keys absent); D4/D5 **top-1 + fallback, in-process; ensemble semantics = “Provider-diverse verified”** (strongest verified model per distinct provider, preserving the multi-LLM cross-check).

Status: - **P-1 (BestClient adapter) — DONE** (e5307ce): pkg/bridge exposes BestClient returning llm.LLMClient. - **R-1 (redirect) — STOPPED HONESTLY**, blocked on prerequisites now being built in **P-1.5** (provider-diverse verified-model API + injectable factory seam) — **IN FLIGHT**.

REMAINING (phased): P-1.5 → **R-1** wire main + redirect the 15 call-sites to bridge.BestClient/BestTranslator → **R-2** remove Ollama → **R-3** remove llama.cpp (+ proto regen, pkg/hardware §11.4.124 investigate-before-remove) → **R-4** Obsolete SSH/distributed (§11.4.90) → **R-5** add CM-NO-LOCAL-RUNTIME gate + paired mutation + full §11.4.40 retest.

Standing constraints (binding every session)

- **No force-push EVER** (§11.4.113 — merge-onto-latest-main, FF-only); **never git add -A** (§11.4.30); **never touch the helix_qa submodule** — another session owns it (§11.4.119 single-resource-owner).
 - **No host power-management** (§12 / CONST-033). **Require API keys, NO local llama.cpp/Ollama/SSH-distributed runtimes.** Operator-blocked → AskUserQuestion (§11.4.66). Endless autonomous loop is the DEFAULT (§11.4.126) with 3–4 parallel subagent streams (§11.4.103).
 - **Working API keys:** DEEPSEEK_API_KEY + GROQ_API_KEY present (real translations work); GEMINI/ZHIPU invalid/quota-blocked (honest errors). NEVER print key values (§11.4.10).
-

🚫 (SUPERSEDED 2026-06-15 ~22:30 — subagent runtime has since reset; reconciliation + P-1 landed) RATE-LIMIT BLOCK + OWED CRASHED-STREAM WORK (2026-06-15 ~19:05)

The subagent runtime hit a session/usage limit (subagents die instantly, ~178 tokens). NO new subagents can run until the **7:10pm Europe/Moscow reset**. Two phase-1 bridge streams CRASHED mid-work (§11.4.147 crash≠done — work OWED, partial state PRESERVED uncommitted in the worktree, do NOT discard, do NOT commit-incomplete §11.4.84/§11.4.121):

LLMsVerifier-bridge mandate (operator CRITICAL 2026-06-15): no local llama.cpp — only LLMsVerifier strongest models + bridge to components AND this Claude Code session. Design: docs/design/LLMSVERIFIER_BRIDGE.md; removal map: docs/design/LOCAL_RUNTIME_REMOVAL.md. LOCKED operator decisions: D1 remove llama.cpp entirely; D2 forbid ALL local runtimes (llama.cpp + Ollama + SSH/distributed); D3 agent access = CLI + MCP; D4/D5 top-1 + fallback, in-process pipeline (env *_API_KEY keys, no service); R1 Obsolete cmd/translate-ssh + cmd/ssh-translation + llamacpp/ollama worker configs (§11.4.90); R2 require keys everywhere (no offline path — tests FAIL not skip when keys absent).

OWED CRASHED STREAMS (respawn after reset, §11.4.147 + §11.4.84 quiescence-check first): - **bridge-core** (was a9659f5) — INCOMPLETE, does NOT build: cmd/model-bridge/main.go:52: undefined: runMCP (crashed before writing the MCP stdio server). Preserved partial: pkg/bridge/ (BestTranslator/Invoke/BestModel/ListVerified facade), cmd/model-bridge/main.go (CLI), internal/verifier/provider_resolver.go+_test.go (numeric-ProviderID gap-fix). RESPAWN to: finish runMCP (MCP stdio server) + .mcp.json wiring + full tests + real best-model/invoke evidence + docs/guides/LLMSVERIFIER_BRIDGE_USAGE.md; then §11.4.142 review + commit. - **web-UI** (was aaf872a) — BUILDS clean (pkg/api + cmd/server). Preserved: pkg/api/dashboard.go+dashboard_test.go, pkg/api/handler.go (M) — wires the unrouted Web Dashboard translation UI (the real §11.4.153 web gap). OWED: independent §11.4.142 review + real-server real-translation evidence run, then commit. (Note: a later phase swaps its provider to bridge.BestTranslator.)

NEXT (post-reset, phased per LOCAL_RUNTIME_REMOVAL.md R-0→R-5): (1) respawn bridge-core to finish; (2) review+commit web-UI; (3) phase-2: redirect all 9 components to bridge.BestTranslator, remove Ollama, remove llama.cpp, Obsolete SSH/distributed (R1), add CM-N0-LOCAL-RUNTIME gate + paired mutation, require-keys-everywhere (R2); (4) HelixQA web-runner browser+video backend extension (needs the helix_qa session) → then the real web-dashboard video. Web-dashboard video remains PENDING until both the UI wiring lands AND HelixQA gains a web/video backend.

DONE + PUSHED this session (all remotes, FF-only): constitution §11.4.153 (74e7fbe, 10 remotes); parent 58178a5→a5e8866→86bf81e→d53e085→fb74c2d→87cd2be→e73e0b7→fb265e7; submodules llm_provider 724e284, containers 2a9923a, llms_verifier 89719e2b. §11.4.153 mandate + 470/472 ledger (21 video-confirmed) + DOCX & PDF output writers + multipass wiring + cli title/atomic-write fixes + prep-translator/server/REST bug fixes + README §11.4.57 + all 9 submodules GREEN.

✓ §11.4.153 LEDGER RE-SYNC (2026-06-15, +DOCX output + -multipass video + cli atomic-write)

Three capabilities became real+evidenced this session and landed+pushed; the feature ledger (docs/features/Status.md + Status_Summary.md) is re-synced honestly (docs UNCOMMITTED — conductor commits, no git add -A): - **DOCX output** — gap → **Implemented** (pure-Go OOXML writer pkg/ebook/docx_writer.go, commit 87cd2be). Verified this session by re-producing a .docx via the shipped writer → file = Microsoft Word 2007+, all 4 OOXML parts, real translated content, correct XML escaping. **Real-artifact-confirmed (NOT video — no .mp4 yet, video PENDING)**. - **-multipass multi-pass verification** — now **video-confirmed**: helixtranslate-cli-multipass-verify-20260615.mp4 (ffprobe 888x630, 93 frames, 9.3s) shows “Step 4: Multi-pass Polishing ✓ Success — Polished over 1 pass with deepseek” + real Spanish output. Engine wired into unified-translator via -multipass in d53e085. - **cmd/cli atomic-write / no-clobber** (87cd2be) — write-safety fix, guard cmd/cli/no_partial_output_test.go (unit-proven, no video required); title path-leak fixed in d53e085. - **Honest counts**: video-confirmed **20** → **21** (the -multipass flip) + **1 real-artifact-confirmed** (DOCX); Status/Status_Summary Rev 2→3; not-implemented gap rows 2→1. - **Exports re-synced**: docs_chain sync features (6 derived nodes) → docs_chain verify features = **in-sync (RC=0)**; HTML+PDF+DOCX siblings regenerated for both docs (all file-verified). - **Remaining gaps now**: PDF output (no writer); cmd/translator local path STUB; llm_provider gofmt hygiene (23 flagged files); cosmetic docx title-twice; web-dashboard translation video **OPERATOR-BLOCKED** (HelixQA-gated). translate-ssh/ebook-translator stay OPERATOR-BLOCKED.

✓ GAP-CLOSURE BATCH (2026-06-15, video/coverage-surfaced gaps — all reviewed GO + pushed)

Three gap-closures (each RED-first §11.4.115, mutation-verified, independent batch review VERDICT GO §11.4.142) landed + pushed: - **Parent d53e085** (pushed all remotes): (1) **cmd/cli title path-leak FIXED** — TXT parser set Metadata.Title=filepath → translated → leaked into output EPUB <dc:title>; sanitizeBookTitle() added at the cmd/cli input→book seam (genuine titles pass through; real run <dc:title>Tiha bašta</dc:title>, NO LEAK). (2) **pkg/verification multipass engine WIRED** (§11.4.124 — git-history proved it was NEVER imported by any cmd/, born dormant 717bf18, finished real code not scaffolding) via opt-in -multipass flag (default OFF, back-compat; guardrails: passes≥1, base preserved on error/empty); RED→GREEN httpstest + real DeepSeek “Step 4: Multi-pass Polishing ✓”; §11.4.150 research docs/research/20260615_video_surfaced_fixes/verification_multipass_wiring.md. - **llm_provider 724e284** (pushed LLMProvider remote; parent gitlink bumped in d53e085): contract test for the interface-only pkg/provider (zero-coverage §11.4.28 gap; mutation-proven; suite green).

NEXT (open gaps, tracked — none blocking the current scope): implement DOCX/PDF **output** writers in pkg/ebook (input-only today); implement cmd/translator local path (STUB “not yet implemented”); fix cmd/cli silent-fail-exit-0 when -model omitted (incidental finding); record a -multipass video for §11.4.153 ledger confirmation (currently real-run+RED→GREEN evidenced, no .mp4 yet); gofmt the 23 pre-existing flagged files in llm_provider; web-dashboard translation video is **OPERATOR-BLOCKED** (HelixQA-gated, separate session). translate-ssh/ebook-translator stay OPERATOR-BLOCKED (need remote SSH/llama.cpp host).

§11.4.153 FEATURE-STATUS VIDEO-CONFIRMATION SYNC (2026-06-15, ~25 real videos → ledger honest)

The §11.4.153 per-feature Status ledger is now in honest sync with the real video evidence captured this session (docs uncommitted — conductor to commit; do NOT git add -A).

What landed before this sync (already pushed): - §11.4.153 doc set (docs/features/Status.md + Status_Summary.md, 470/472 features, four-format HTML+PDF+DOCX) shipped in 58178a5; constitution bump 74e7fbe. - **3 video-surfaced bugs FIXED + pushed** in a5e8866 (the green suite had missed all 3, §11.4.4/§11.4.138): (1) preparation-translator DEAD — DeepSeek API key never reached config (-api-key/env not wired) → “DeepSeek API key is required”, no analysis JSON; (2) cmd/server TLS startup — config with no tls_cert_file failed to start; fix backfills self-signed certs in LoadConfig; (3) REST POST /api/v1/translate ignored target_lang (hardcoded) → always Serbian regardless of requested language. - **~25 real videos** captured under /Volumes/T7/Downloads/Recordings/helixtranslate-*.mp4 (all ffprobe-verified dur>0+frames>0; key ones content-verified frame-by-frame this session). - **All 9 owned submodules GREEN** — coverage logs qa-results/submodule_coverage_20260615/. - **README §11.4.57** Tracked-Items doc-link section added (prior session).

This sync (Status.md/Status_Summary.md Rev 1→2 + exports re-synced): - **Video-confirmed: 1 → 20** feature rows (≈4.3% of 472), each flipped to Confirmed: ONLY after the cited .mp4 was content-verified (§11.4.6 no overclaim). Confirmed: unified-translator (DeepSeek translate; EPUB→TXT / HTML→EPUB / FB2→EPUB / FB2→FB2; Serbian-Cyrillic; -script Cyrillic↔Latin; format-detection; help/version; -verify), REST API (POST /api/v1/translate real DeepSeek + target_lang FIXED, TLS startup FIXED, /health-/version-/providers), gRPC (real EN→ES), markdown-translator (EPUB↔MD round-trip), preparation-translator (FIXED), cmd/cli (real DeepSeek), monitor-server (live WS hub), DeepSeek library client. - **Honest gaps recorded (§11.4.6, NOT confirmed):** DOCX output + PDF output UNIMPLEMENTED (no writer in pkg/ebook; unified-translator rejects them; 2 new gap rows added → 472 total); -verify ≠ pkg/verification multipass engine (engine has no CLI entry point wired in); cmd/translator local path = STUB (“local translation not yet implemented”); cmd/translate-ssh + cmd/ebook-translator = OPERATOR-BLOCKED (need remote SSH/llama.cpp worker host); GET /api/v1/verified-models = 404 (LLMsVerifier disabled in config); cmd/cli minor cosmetic file-path-leak into title metadata. - **Exports + fingerprint re-synced** via docs_chain sync features (applied: 6 derived nodes — HTML/PDF/DOCX × 2 docs) →

docs_chain verify features = **in-sync** (RC=0); evidence qa-results/
docs_chain/20260615T144104Z/sync.log; docs_chain state.json = §11.4.86
content-hash fingerprint store.

NEXT (open gaps queued): implement DOCX/PDF output writers in pkg/ebook;
wire pkg/verification multipass engine into a CLI entry point; implement cmd/
translator local path; produce videos for remaining PENDING runtime features
(web dashboard translation, other providers) to lift coverage. translate-ssh/
ebook-translator stay OPERATOR-BLOCKED until a remote SSH/llama.cpp
host is provided.

WAVE 15 — SECOND-PASS + determinism (campaign 101→110; second pass STILL productive)

Parent HEAD 6c89910, build/vet/test green, git OK, llms_verifier pointer intact. -
pkg/ebook 6c11dee (#102): EPUB parser set chapter.Title to the zip entry name →
EPUB→translate→EPUB rendered “OEBPS/chapter1.xhtml” as every chapter
heading + TOC entry (core use case). Fix = extractChapterTitle (
